

## A MESSI YEAR

Congratulations to Argentina for winning their third World Cup, putting them behind only Brazil (5), Germany (4) and Italy (4)\* for most World Cup titles. Team captain – and global superstar – Lionel Messi’s only World Cup title certainly came during a messy year for financial markets. Despite healthy gains in the fourth quarter, financial markets were not completely able to fix the mess they had created for themselves throughout much of 2022. Global equities’ 9.9% fourth quarter gain still left investors down 18.0% for the full year. And despite investment grade fixed income finally posting a quarterly gain (+1.9%), the usually safer part of the investor portfolio lost 13.0% in 2022. In fact, the only asset class outpacing the return of “risk-free” cash last year was natural resources (+10.3%) – and that was thanks to an incredibly strong fourth quarter (+17.2%).

**Goal of the Century.** For some (notably England fans), seeing Messi win his World Cup may bring back memories of Diego Maradona winning Argentina’s second World Cup back in 1986. Maradona’s performance in the quarterfinal match against England that year inspired former Bank of England Governor Mervyn King’s “Maradona theory of interest rates.” Called the *Goal of the Century*, Maradona went over half the field – evading five defenders – to put the ball in the net. King observed Maradona’s path to the goal effectively took him in a straight line – and he was able to do so because the defenders expected him to go left or right. King theorized that central bankers could also “move in a straight line” (maintain steady monetary policy)

so long as market participants *expected* more central bank activity. Bringing the analogy to present day, central banks – but especially the Federal Reserve – are greatly focused on regaining credibility such that they can “Maradona” the way through most of 2023. That is, the Fed is hopeful its strong message to the markets that they will extinguish inflation – along with a few more rate hikes – will allow them to finally take a straight line for the rest of 2023. Putting numbers and dates to the above, the Fed policy rate (currently at 4.5%) is expected to peak between 5% and 5.25% by either at or near the May Fed meeting.

**Hand of God.** In fact, Maradona had two noteworthy goals in that 1986 quarterfinal match. The other – called the *Hand of God* – was a goal thought to be off Maradona’s head but was actually off his hand (this was pre-VAR\*\*). Sometimes you need a bit of luck. Certainly the Fed could use some luck in bringing inflation down toward its 2% target. The record pace of rate hikes in 2022 should assist – as should the invisible hand (not God’s – Adam Smith’s) as it continues to heal supply and demand mismatches. The supply/demand mismatch to watch at this point is in the labor markets, where Fed tightening has yet to notably slow hiring or overall labor demand. Should the Fed be able to quickly and effectively address the labor/wage issue, 2023 could be less Messi and more Maradona.

\*Rounding out the list of previous World Cup winners: Uruguay (2), France (2), England (1), Spain (1)

### FOURTH QUARTER 2022 TOTAL RETURNS (%)

Financial markets rebounded in the fourth quarter, yet most major asset classes still ended with double-digit losses in 2022.

## KEY DEVELOPMENTS

### China Changes Course

A negative investor reaction to the readout from China's Party Congress involving a more state-led economic approach pushed China equity markets down more than 15% in October. However, China equities sharply reversed course and outperformed other regions for the quarter as policymakers announced a number of moves pivoting away from zero-Covid policies (less testing, quarantines, travel restrictions, etc.). Despite the reopening, the near-term growth outlook remains fairly uncertain given public health risk from the virus.

CHINA EQUITIES RELATIVE PERFORMANCE (%)

### Inflation Still in the Spotlight

Inflation retained its spot as a key area of focus for investors in the fourth quarter. In the U.S., Consumer Price Index (CPI) inflation reports were generally the most market-moving data releases in 2022. Inflation data released in the quarter was more favorable with deceleration in headline and core figures from both year-over-year and month-over-month standpoints – with equity markets responding favorably to this (see chart). However, lingering strength on wage growth and the services side of the economy remains a concern.

S&P 500 RETURNS ON DAY OF U.S. CPI RELEASE (%)

### Approaching the Destination

2022 was a year of historic central bank tightening with many central banks raising rates by 3% or more. In the fourth quarter, central banks slowed the pace of tightening, with investor debate shifting to the peak level of policy rates and the duration of restrictive policy. The Fed and European Central Bank (ECB) both raised rates by 1.25% in the quarter while the Bank of Japan (BOJ) surprised investors by widening its target rate bands for yield curve control; implying an exit from its ultra-accommodative policy is more likely in 2023.

CENTRAL BANK TIGHTENING (%)

### 60/40 Struggles

Despite some gains in the fourth quarter, 2022 was a rough year for investors with double-digit losses in both equity and fixed income markets. Inflation, central bank tightening and rising interest rates played a key role in the losses for both equities and fixed income, while equities were further hit by growth concerns and geopolitical uncertainty. In a historically weak year for a 60/40 portfolio mix (second only to 2008), 2022 was the only year where bonds did not play a diversifying role to help offset material losses in equities.

## MARKET REVIEW

### Interest Rates

After hiking 75 bps in November, the Fed executed a “hawkish deceleration” in December. It downshifted to a 50-bp pace, but simultaneously raised its projected year-end 2023 rate to 5.1%. While 75-bp hikes may no longer be the status quo, price stability is still the Fed’s top priority. Short-term Treasury yields rose on ongoing tightening, while the rise in longer yields lost steam as investors priced in an upcoming pause in the rate cycle as well as the economic impacts of the tightening. The Treasury curve is deeply inverted headed into 2023.

### U.S. TREASURY YIELD CURVE

### Credit Markets

Barring a swift move higher in early-to-mid October as investors tried to assess the Fed policy trajectory, credit spreads contracted for most of the quarter. Credit sentiment improved as central banks beginning to pivot toward less aggressive policy tightening raised hope that adverse-case default scenarios can be avoided. High yield (+4.2%) outperformed investment grade fixed income (+1.9%). High yield benefited from its higher starting point yield, less direct exposure to interest rate volatility and greater leverage to corporate resilience.

### CREDIT SPREADS

### Equities

Global equities gained 9.9% as a relief rally took hold. Fundamentals held up relatively well, while valuations rose as sentiment turned more positive on signs of receding inflation risk and greater monetary policy certainty. While the rally was broad-based, stocks with resilient fundamentals did particularly well. Regionally, non-U.S. equities (dev. ex-U.S. equities up 16.1% and emerging market equities up 9.6%) bested U.S. equities (up 7.2%), helped by more market friendly central bank activity, a declining dollar and a reopening China.

### REGIONAL EQUITY INDICES

### Real Assets

Natural resources (NR) closed out its standout year with a strong quarter, gaining 17.2% versus 11.0% for global listed infrastructure (GLI) and 7.4% for global real estate (GRE). NR benefited from strong fundamentals, tight commodity supply and a better demand outlook due to China’s reopening as well as the potential for less central bank headwinds moving forward. GLI was also helped by energy-related exposure, albeit less than NR. GRE underperformed global equities, with office and residential sector weakness serving as a drag.
